Instant Boiling and Chilled Filtered Water System

Space saving
Elegant and efficient

Lowest Energy

Billi's unique energy reclaim systems recovers waste heat energy generated by chilling water and reuses the energy to preheat the boiling water, thereby saving energy. By considering composition and construction of each component to every unit Billi achieves Australia's lowest carbon foot print.

Smallest underbench size

On space saving, Billi systems are often less than half the size of comparative products

Billi are the only manufacturer to offer both water-cooled and air-cooled options. Water-cooled systems are the most energy efficient option and Billi's heat exchange technology ensures water usage is absolutely minimal. Billi's air cooled option generates far less heat than traditional air-cooled systems.

Water Cooled

Safety

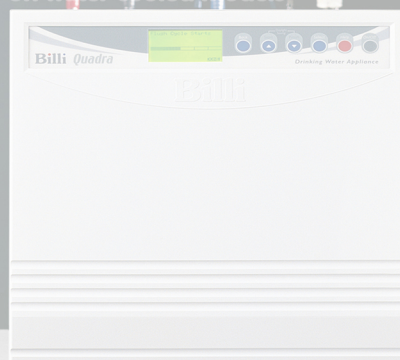

Billi's splash free boiling water delivery electronically varies the water flow, slowing momentarily to eliminate splashing as the water enters the cup

Temperature

A simple adjustment allows the chilled water temperature to be raised to 15 C or lowered to 6 C for perfectly chilled, refreshing drinks.

Convenience

No cupboard ventilation required on water cooled models
